Custom software built around your business

Web apps, internal tools and APIs for ambitious Indian businesses.

Custom Software & Web App Developer

Who I am

Dhruvil Shah

WeExalate Dev Solutions, Valsad

85+

projects delivered since 2019

Classification	Custom Software & Web App Developer
What I build	Web apps, internal tools and APIs built around how your business works
Who for	Owners and teams that have outgrown spreadsheets, WhatsApp orders or software no one can maintain

The problem

When a business outgrows its tools

Today

- Orders arrive on WhatsApp
- Stock lives in Excel
- Reports are built by hand
- Follow-ups kept in someone's head
- Code nobody can maintain

With custom software

One system, built for you

- ✓ Orders, stock and team in one place
- ✓ Live dashboards instead of manual reports
- ✓ Clean code your next developer can follow

What I build

Software that fits how you work

Web applications

Customer portals, SaaS products and platforms built to grow with their users.

Internal tools

Dashboards that replace spreadsheets and manual workflows.

API-first systems

Connect your tools through clean, documented APIs.

Built with Next.js · React · TypeScript · Node.js · PostgreSQL · MongoDB · AWS · Vercel

Proof

Recent builds, open on GitHub

github.com/weexalatedev

weexalatedev/bill

EnerOS

An energy billing console on web and mobile, backed by one shared API.

Next.js · React Native · Node.js · MongoDB

weexalatedev/pms-window

Window PMS

A production system where orders move through tasks, alerts and a kanban board.

Next.js · MongoDB · Clerk · Firebase

weexalatedev/image-downloader

Image Extractor

An internal tool that pulls images from any page into one gallery and a ZIP.

Next.js · TypeScript · Tailwind · Cloudflare R2

How we work

From first call to launch, and beyond

Quoted upfront. Scope changes are discussed before any work proceeds.

01
Discovery call
1–2 hrs

We understand your goals and how the business runs.

02
Strategy and proposal
2–3 days

Stack, timeline, milestones and clear pricing.

03
Design and build
3–8 weeks

You approve the design before build begins. Weekly check-ins.

04
QA and launch
1 week

Device testing, performance tuning and go-live.

05
Support
Ongoing

Monitoring and maintenance after launch.

How custom software works

Your workflow, built into one system

From first conversation to a tool your team uses every day.

Built around you

No templates to squeeze into. Every screen and rule follows how your business already runs.

01

We map how you work

Orders, stock, approvals and who does what.

02

We design it with you

You approve the screens before any build begins.

03

We build and hand over

Weekly check-ins, device testing and clean code your next developer can follow.

Custom vs ready-made

Software that adapts to you, not the other way round

Off the shelf

Ready-made software

- ✕ You adapt to its process
- ✕ Features you pay for but never use
- ✕ Limits appear as you grow
- ✕ Your data sits on their platform

Built for you

Custom software

- ✓ Built around your process
- ✓ Only the features you need
- ✓ Grows with your business
- ✓ Code and data under your control

One order, end to end

What changes when everything is in one place

01

Order arrives

From a form, an app or your team, straight into the system.

02

Details saved

Customer, items and dates recorded once, with no retyping.

03

Team is updated

Stock adjusts. Tasks and alerts reach the right people.

04

Live dashboard

The owner sees the numbers without waiting for a report.

BEFORE

WhatsApp orders, Excel stock, reports built by hand

AFTER

One system, one live view of the business

AI consultation

Where can AI genuinely help your business?

A practical review of your workflow, before you spend on any tool.

01

Review

We look at how work flows through your team today.

02

Recommend

Clear advice on where AI helps, and where it does not.

03

Pilot

One small, focused test before you invest further.

Where AI helps

Practical uses for everyday business work

Automation

Repetitive work

Draft quotes, invoices and replies from your own data.

Insight

Reports and insights

Spot patterns in sales, stock and orders without building reports by hand.

Support

Customer replies

Answer common questions quickly, with a person in the loop.

Knowledge

Search your documents

Find answers across manuals, policies and past orders in seconds.

How an AI consultation works

From first conversation to a small pilot

Honest advice first. If AI is not the right answer, I will say so.

01

Understand

Workflow

We learn how your business and team work today.

02

Identify

Opportunities

We find where AI saves effort, and where it does not.

03

Plan

Roadmap

Priorities, tools and costs, agreed before anything starts.

04

Pilot

Small test

One focused trial, measured, before you scale.

A recent project

One real problem, solved

The problem

Where the business was stuck

The build

What I made, in one sentence

The result

What changed for the owner

My ask this week

Who do you know who is a business owner who runs orders, stock or staff on Excel and WhatsApp?

Listen for something like

01

Orders, stock or staff tracked in Excel and WhatsApp

02

Software built by a developer who left, with no one able to maintain it

03

A startup that needs its first product built on a solid structure

Thank you, BNI Shreshtha

Questions?

Ask me anything about custom software and web apps.
